

INFS605 Programming Assignment 2 – Marking Rubric

Criterion	Excellent	Good	Developing	Incomplete or Incorrect	Weight
Functional Completeness	All APIs work as expected; endpoints are well-documented and return correct responses	Most APIs function; minor issues or bugs; partially documented	Only some endpoints functional; incomplete API interactions	APIs non-functional or absent	10
Microservices Architecture & Separation	Clear separation of concerns; services are independent, loosely coupled, scalable	Mostly separate services; some cross-service dependencies or tight coupling	Partial modularity; services not clearly separated or poorly integrated	Monolithic design; unclear service boundaries	15
Dockerization and Deployment	All services containerized correctly; docker-compose works seamlessly	Minor docker/config issues; some manual steps needed	Incomplete containerization; docker-compose errors	Not containerized or broken deployment setup	5
Documentation	Clear README with setup steps, service descriptions, architecture diagram, and visuals	Mostly complete README with some setup or usage instructions missing	README present but minimal or unclear; missing diagram/screenshot	No README or documentation provided	5
Code Quality and Modularity	Code is well-structured, reusable, well-commented, and modular	Generally clean code; few stylistic/modularity issues	Code runs but lacks structure, reuse, or clarity	Poorly written or hard-to-follow code	5
